

TIME TO SMILE TERRAZAMAR

Sustainable Purchasing Policy

TERRAZAMAR uses the following criteria for its sustainable purchasing :

- Asking suppliers for their sustainability commitment and their policy, including supporting evidence and documentation.
- Discuss with the supplier their method of delivery and packaging.
- Look at reducing energy and water consumption.
- Ask 3 different suppliers before buying something new. We take into account the price, quality or delivery date.

As a purchaser we will take into account what impact it will have on the local and wider environment.

- TERRAZAMAR will aim to buy environmentally and socially responsible products.
- We aim to reduce waste and other negative impacts on the environment.

Sustainable purchasing should consider the environment, social and economic consequences of:

- design;
- non-renewable material use;
- manufacture and production methods;
- logistics;
- service delivery;
- use;
- operation;
- maintenance;
- reuse;
- recycling options;
- disposal; and
- Suppliers' capabilities to address these issues throughout the supply chain:

Environment

- Reduce buying, i.e. buying in bulk
- Long life products
- Recycled or recyclable goods
- Reduced impact
- Sustainably produced/sourced

For Year 2025 we set up the target to ask to local suppliers to budget amenities more sustainability's
